PSPlace (v4) Installation

Introduction:

The installation processes for PSPlace (v4) and ProjectSymbols have changed. Please read this guide carefully when upgrading to the new versions of the software. The changes allow for easier symbols updates and complete network integration.

Enhancements have been made to all of the symbols libraries. PSPlace (v4) only accepts the new format for symbols. Enhancements have been made to all of the symbols libraries. These enhancements require some additional configuration files. *You will need to update all of your symbols libraries for these changes to take effect. Failure to do so will cause the symbols to not work properly.*

If you have upgraded to AutoCAD 2007 and you use any of the ProjectMatrix Toolpaks (Panel Builders), you will need to update each one as well. The new features available in PSPIace (v4) will not work correctly unless each Toolpak is updated.

New Features:

The addition of optioning and re-optioning of parts is now available in PSPlace (v4). Please follow the instructions below to install the software.

NOTE

When installing PSPlace (v4) the user must have Administrator or Power User rights. If this is not possible, some directories must be manually set to allow read/write access. Please see the Troubleshooting section of this guide for more details.

PSPlace (v4) Installation Instructions

1. *Make sure that AutoCAD and all ProjectMatrix software is shutdown*. Insert your ProjectMatrix for Haworth CD and choose the **Project-Symbols button** on the Main Setup Window.

Figure 1-A

 The installer will check your computer for previous versions of Project-Symbols. If you have previously installed the ProjectSymbols software and wish to keep your current settings choose **Yes** in the window that appears. If you have made changes to the location of your symbols, or if you have recently updated or added any new versions of AutoCAD please choose **No**.

If you chose **Yes**, the install will uncompress the files and the setup will complete.

Question 🛛 🕅				
?	Do you want to reinstall PSPlace using the settings from your last install?			
	Yes No			

Figure 2-A

If you chose No, or if this is a first time installation then continue on to step 3.

3. The welcome screen will appear. Click Next to continue.

Appendix A

Network installation options for PSPIace (v4)

If installing symbols to a network it is recommend that you create the network folders to house the symbol and configuration files. Example listed below:

Network drive:\ProjectSymbols\Symbols *Network drive*:\ProjectSymbols\MFGSupportFiles *Network drive*:\ProjectSymbols\CADCAT

If your symbols are already located on a network drive, select the correct path for each of the three directories.

InstallShield Wizard		X

Troubleshooting

Troubleshooting

1. User Rights

When installing PSPlace (v4) the user must have Administrator or Power User rights. If this is not possible, some directories must be manually set to allow read/write access.

Users must have read/write access to the following directories...

C:\Program Files\ProjectMatrix C:\Program Files\Common Files\ProjectMatrix C:\Windows

2. Network Problems

If you are experiencing any problems using the symbols over the network please check the following...

If your symbols are running slowly it may be due to your antivirus software. Some antivirus software actively scans every file being brought across the network and slows down performance. It is a good idea to setup rules in your antivirus software to not actively scan the symbols directories on your network. This can speed up the performance when placing symbols.
